

**King's College  
Athletic Training Program**

**Health and Infectious Disease Control Policy**

All Athletic Training Students must have the following immunization before beginning clinical experiences in AT 202 Athletic Training Clinical II: **measles, mumps, and rubella (MMR) vaccination**. The Commonwealth of Pennsylvania, King's College and the Athletic Training Program require that all students have this vaccination. Students who live on campus must also have either the meningococcal vaccination OR a waiver declining the meningococcal vaccination. All Athletic Training Students are encouraged to obtain the hepatitis B vaccination but it is not required. All Athletic Training Students who decline the hepatitis B vaccination will be required to sign a declination waiver.

In addition, all students (or parent/guardian if under 18) must complete the King's College Athletic Training Program Technical Standards for Admission form.

It is the responsibility of the Athletic Training Student to be aware of his/her current state of health. If an Athletic Training Student suspects that he/she is ill, he/she should report to a physician, physician assistant, or nurse practitioner for evaluation and diagnosis. It is the responsibility of the Athletic Training Student to ask the health care practitioner if the Athletic Training Student should be restricted from treating patients. The Athletic Training Student should follow those restrictions and must inform the Preceptor if those restrictions will prevent them from attending a clinical assignment.

The Athletic Training Program complies with the non-discriminatory policies of the College regarding individuals with potentially disabling conditions, including those resulting from infectious diseases. Athletic Training Students are required to be in compliance with the Program's Bloodborne Pathogens Exposure Control Plan at all times.
